

**GOD'S WORDS FOR TODAY (Mk 4:21-25)****The Holy Gospel according to St. Mark,**

Jesus said to the crowd, "Is a lamp brought in to be placed under a bushel basket or under a bed, and not to be placed on a lampstand? For there is nothing hidden except to be made visible; nothing is secret except to come to light. Anyone who has ears to hear ought to hear." He also told them, "Take care what you hear. The measure with which you measure will be measured out to you, and still more will be given to you. To the one who has, more will be given; from the one who has not, even what he has will be taken away."

Reflection:

The Parable of the Lamp illustrates the essence of discipleship or as follower of Christ. Just as a lighted lamp shines, we have no option but to shed light on the world. After we have received the light of the gospel from Jesus, we ourselves now become a source of light for those who live in darkness. They have to live the life of Christ and should reflect the values of the kingdom in their words and deeds.

Prayer:

Let us pray.

Lord, make us a shining instrument of your light as we become sharers of your word through the day's gospel.... Amen.

St. John Baptist de la Salle.....Pray for us.

Live Jesus in our hearts.....Forever!

MISSION VISION

"To be a sign of faith as an excellent educational institution, sharing in the Lasallian mission of teaching minds, touching hearts and transforming lives."

cont...Autism

What Causes Autism?

No one knows what causes autism spectrum disorders. Scientists think that there's a connection to genetics (something to do with a kid's genes) and the environment. Some kids might be more likely to get autism because it runs in their families.

Other kids get it even if nobody in their family has these types of problems.

Knowing the exact cause of autism is hard because the human brain is very complicated. The brain contains more than 100 billion nerve cells called neurons (say: NUR-ahns). Each neuron may have hundreds or thousands of connections that carry messages to other nerve cells in the brain and body. The connections and the chemical messengers they send (called neurotransmitters) keep the neurons working as they should. When they do, you can see, feel, move, remember, experience emotions, communicate, and do lots of other important stuff.

In the brain of a kid with autism, some of those cells and connections don't develop normally or don't get organized like they're supposed to. Scientists are still trying to understand how and why this happens.
