

**GOD'S WORDS FOR TODAY (Mk.4:21-25)**

***The Holy Gospel according to St. Mark***

He also said to them, 'Is a lamp brought in to be put under a tub or under the bed? Surely to be put on the lamp-stand? For there is nothing hidden, but it must be disclosed, nothing kept secret except to be brought to light. Anyone who has ears for listening should listen!' He also said to them, 'Take notice of what you are hearing. The standard you use will be used for you -- and you will receive more besides; anyone who has, will be given more; anyone who has not, will be deprived even of what he has.'

**MISSION VISION**

"Inspired by our faith in God, by our Catholic traditions and by the charism of St. John Baptist de La Salle educational innovator par excellence, we together and by association are committed to give quality human and Christian education to all building a society founded on equity and justice and on sustainable and inclusive development."

**FROM THE INSTITUTIONAL HEALTH SERVICES:**

**Hepatitis B**

**Key facts**

- Hepatitis B is a viral infection that attacks the liver and can cause both acute and chronic disease.
- The virus is transmitted through contact with the blood or other body fluids of an infected person.
- An estimated 257 million people are living with hepatitis B virus infection (defined as hepatitis B surface antigen positive).
- Hepatitis B is an important occupational hazard for health workers.
- However, it can be prevented by currently available safe and effective vaccine.

**Hepatitis B** is a potentially life-threatening liver infection caused by the hepatitis B virus (HBV). It is a major global health problem. It can cause chronic infection and puts people at high risk of death from cirrhosis and liver cancer.

**Transmission**

The hepatitis B virus can survive outside the body for at least 7 days. During this time, the virus can still cause infection if it enters the body of a person who is not protected by the vaccine. The incubation period of the hepatitis B virus is 75 days on average, but can vary from 30 to 180 days. The virus may be detected within 30 to 60 days after infection and can persist and develop into chronic hepatitis B.

Hepatitis B is also spread by:

- percutaneous or mucosal exposure to infected blood and various body fluids, as well as through saliva, menstrual, vaginal, and seminal fluids.
- Sexual transmission of hepatitis B may occur, particularly in unvaccinated men who have sex with men and heterosexual persons with multiple sex partners or contact with sex workers. Infection in adulthood leads to chronic hepatitis in less than 5% of cases.
- Transmission of the virus may also occur through the reuse of needles and syringes either in health-care settings or among persons who inject drugs.
- In addition, infection can occur during medical, surgical and dental procedures, through tattooing, or through the use of razors and similar objects that are contaminated with infected blood.
- In highly endemic areas, hepatitis B is most commonly spread from mother to child at birth (perinatal transmission), or through horizontal transmission (exposure to infected blood), especially from an infected child to an uninfected child during the first 5 years of life. The development of chronic infection is very common in infants infected from their mothers or before the age of 5 years. to be cont....
